3. What is the Microbiome?
4. Why do organ transplants work best between people of the same race?
  - a. Race doesn't matter in organ transplant because race is only skin deep
  - b. The proteins expressed on our cells are race-specific and need to match as much as possible for a successful organ transplant
5. Which of the following are true?
  - a. Bacteria recognize racial differences
  - b. Our immune system recognizes racial differences
  - c. Babies recognize different races
  - d. All of the above

### ESSAY QUESTIONS

Today's essay assignment will be a fun break from reading anti-white material. Choose a sport or other physical activity that you enjoy doing or watching. Name it here:

\_\_\_\_\_ . Answer the following questions:

1. What race of people predominates in that sport or physical activity?
2. Based on what you learned in this lecture, list some possible structural and/or physiologic reasons why people of that race may excel at that sport.

3. Find a video online of a top-level white person performing your activity of interest. Take inspiration from that person. Know that the Spirit of the West lives in you and spurs you to greatness. You may never be an Olympian, but you are capable of great things.

## ANSWERS

### COMPREHENSION QUESTIONS
